

Open Issues

This list is a documented collection of known bugs, limitations, needed enhancements, needed features that need to be addressed, resolved, or implemented in DBT.

Issue description	Reporter	Reporting Date	Proposed Solution
While submitting a PR, even with a small change, the CI Job is running 15 to 20 minutes to complete.	@Rain Harrigan	Sep 8, 2023	<p>Sep 10, 2023 After investigation, we realized that the CI job runs on all models with all data in all environment (Development, UAT and PROD). While we want the test to run on all models with all data prior to be merged to Production, no matter the type of change, to ensure bug free code and overall data quality, we are looking at limiting the CI job in Development and UAT on the updated models and dependencies as well as on a smaller data set (i.e. last 7 days).</p> <p>We are currently PoCing the solution in snowflake and plan to present by end of week 9/18.</p> <p>Dec 4, 2023 Deferral has been implemented in dbt snowflake project.</p>
