

Re link GitHub to DBT using SAML SSO

Even though GitHub SAML SSO is active, our design requires a mix of personal and AD accounts. Don't worry, it's only until we complete the AD Group provisioning.

To make sure you've got GitHub and DBT in perfect harmony, follow the step-by-step guide below:

1. Log Into GitHub using the URL:

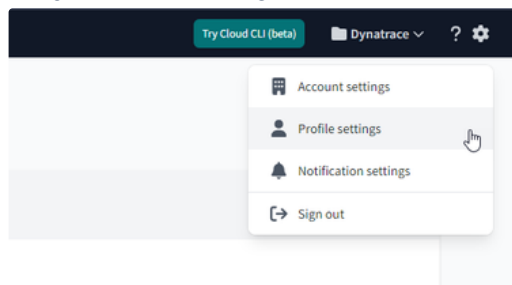

<https://github.com/orgs/Dynatrace-BusSys-BI/sso>

i Bookmark this URL for future use and delete your legacy GitHub bookmark.

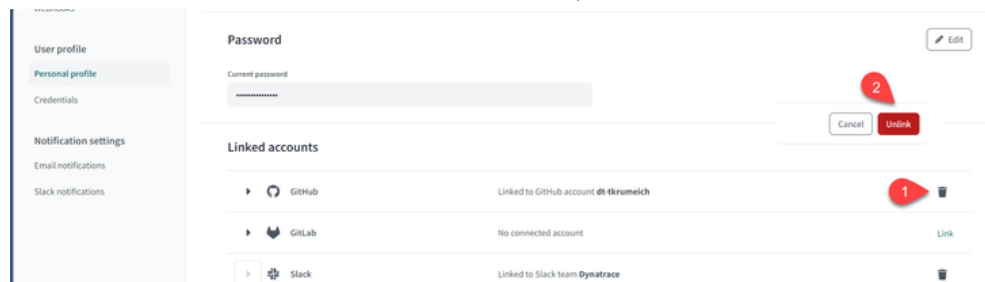

2. Log into DBT using the URL:

<https://cloud.getdbt.com/enterprise-login/dynatrace/>

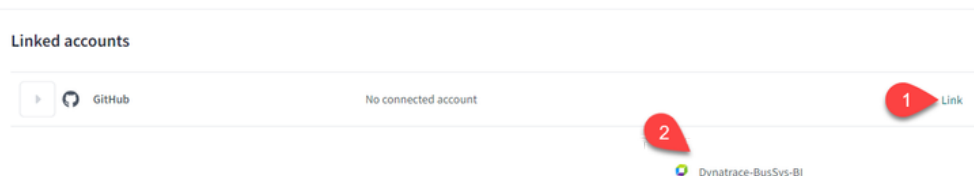

3. Navigate to **Profile Setting**

4. Unlink GitHub from Personal Profile. Click on the **trash** icon, then click on **Unlink** button.

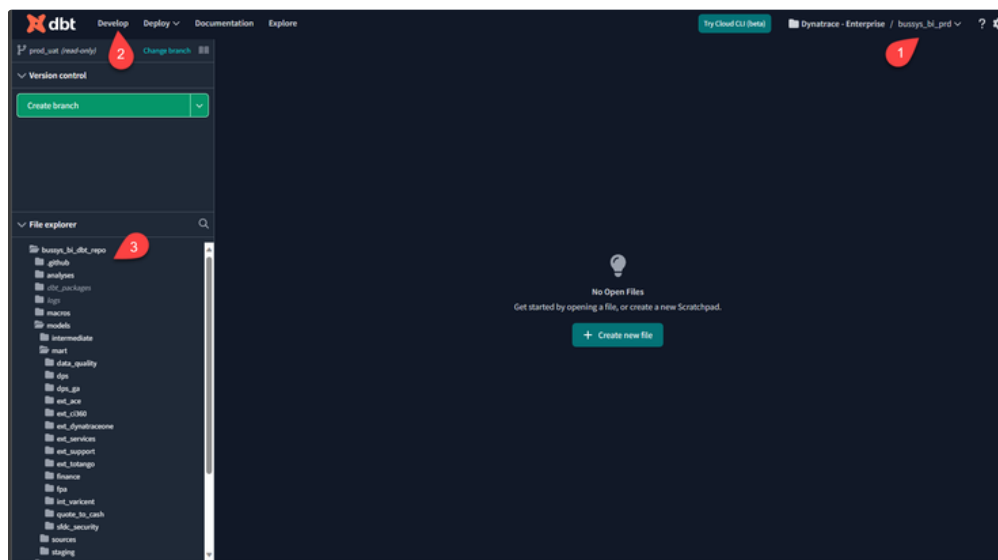

5. Link GitHub to Personal Profile. Click on **Link**. Add **Dynatrace-BusSys-BI**.

6. Open up either project **global_prod_snow_bussys** or **bussys_bi_prd**.
Head on over to **Develop**.

You should see all the objects stored in the repo. If they're visible, congrats! You've successfully re-linked..

Stuck at any point? Issues creeping up during the re-linking process? No worries! Contact [@Thierry Krumeich](#) .
